SUMMARY

- AI Engineer focused on building intelligent systems that solve real-world business problems through Generative AI, LLMs, and AI Agents. Experienced in developing RAG applications, multi-agent workflows, and AI automation solutions using Python, LangChain, LangGraph, FastAPI, and vector databases. Passionate about transforming complex AI concepts into practical, scalable products and continuously exploring emerging AI technologies.

TECHNICAL SKILLS

- **Languages and Frameworks:** Python, FastAPI, Node.js, Express, React, Vite, React Router
- **ML and DL:** PyTorch, TensorFlow, Scikit-learn, LSTM ,Fine-tuning(Falcon,LLAMA)
- **Data and Visualization:** Pandas, NumPy, Matplotlib, Seaborn, Streamlit
- **AI and LLM Stack:** LangChain, LangGraph, RAG , Prompt Engineering, AI Agents, Multi-Agent Systems, Semantic Search, Embedding Models, Vector Databases, Function/Tool Calling
- **Databases:** PostgreSQL, MongoDB, SQLite, ChromaDB, Airtable, Prisma ORM
- **Deployment & APIs:** FastAPI, REST APIs, Nodemailer, Multer, pdf-parse, Mammoth
- **Automation:** Playwright, n8n, Web Scraping, Workflow Automation
- **Reporting & Integrations:** gspread, openpyxl, Google Sheets API
- **Developer Tools:** Git, GitHub, VS Code, Jupyter Notebook, Google Colab

EXPERIENCE

AI Engineer
March 2026 – Present

Symtera Technologies
Lahore, Pakistan

- **Database Design & Data Storage** – Designed PostgreSQL database schemas and integrated structured data storage into AI workflows using Python.
- **Data Cleaning & API Integration** – Improved dataset quality and developed FastAPI endpoints to expose and manage database records efficiently.
- **Project Planning & Documentation** – Led LinkedIn Automation project planning, including PRD creation, requirement gathering, workflow design, and system architecture.
- **LinkedIn Automation Development** – Engineered a multi-agent automation system for LinkedIn lead generation, data scraping, and automated outreach messaging.

Machine Learning Intern
January 2026 – March 2026

Elevvo Pathways
Remote

- **Student Score Prediction** – Developed a Linear/Polynomial Regression model for student performance prediction with a full data cleaning and evaluation pipeline.
- **Loan Approval Prediction** – Implemented a Logistic Regression & DCNN classification model, handling imbalanced data with SMOTE.
- **Movie Recommendation System** – Built a collaborative filtering system using user-item matrices and matrix factorization.
- **Traffic Sign Recognition** – Developed a CNN-based traffic sign classifier with image preprocessing and data augmentation.

AI / Deep Learning Intern
June 2025 – september 2025

DeVvibe
Multan, Pakistan

- Developed multiple end-to-end ML/DL applications spanning fraud detection, NLP, computer vision, forecasting, and healthcare AI.
- Built and trained CNN, LSTM, ANN, and Transformer-based models for classification, generation, and time-series tasks.
- Worked extensively with TensorFlow, Keras, Scikit-learn, and BERT across diverse deep learning use cases.
- Applied data preprocessing, feature engineering, model evaluation, and deployment techniques across all projects.

PROJECTS

Agentic Hiring Automation Platform — 2026

- Designed and built a full-stack, end-to-end AI-powered recruitment platform automating the entire hiring pipeline – job posting, CV parsing, JD-match scoring, auto-shortlisting, interview scheduling, offers, and onboarding.
- Integrated an LLM-driven screening engine using **function/tool calling** to extract structured candidate profiles and generate schema-validated 0–100 JD-match scores against any OpenAI-compatible provider (Groq, OpenAI, DeepSeek), with a resilient **pdf-parse**/**Mammoth** CV parsing pipeline and type-normalization for inconsistent open-source model outputs.
- Automated the full candidate lifecycle with **Nodemailer**-driven transactional emails and an AI job-post generator for platform-tailored LinkedIn/Indeed copy; engineered the backend with **Node.js**, **Express**, and **Prisma ORM**, plus a **React (Vite)** HR dashboard with hiring-funnel analytics and CSV export.

LinkedIn Lead Generation & Automation Agent — 2026

- Architected a fully autonomous multi-agent system for end-to-end LinkedIn lead generation, qualification, and outreach with zero manual intervention.
- Built a scraping pipeline using **Playwright**, feeding structured profile and company data into an LLM-based classification layer.
- Implemented a custom rule-based lead scoring engine evaluated by **LLaMA & Claude Sonnet**, orchestrated via **LangGraph** for stateful multi-agent workflows.
- Automated the full outreach cycle – connection requests, personalized messaging, and follow-ups – driven entirely by agent logic.

AI Job-Lead Intelligence & Scoring Pipeline — 2026

- Built a standalone system that scrapes remote job and contract listings from LinkedIn's public jobs board (no login), storing and deduplicating leads in a **SQLite** database to target real hiring/contract opportunities.
- Built an AI scoring engine that ranks each listing by how likely it is to be winnable contract/project work (vs. a fixed job), using a **Groq**-backed LLM for verification, and auto-exports the ranked shortlist to Google Sheets/Excel via **gspread** and **openpyxl**.

RAG-Based Intelligent Chatbot – Symtera Technologies — 2026

- Built a production-ready RAG chatbot by scraping company data and structuring it into a domain-specific knowledge base.
- Generated semantic embeddings using **BAAI/bge-small-en-v1.5**, stored and queried via **ChromaDB** vector database.
- Implemented query-aware re-ranking and topic-similarity detection to maintain relevant context across multi-turn conversations.
- Integrated **LLaMA 3.1** (via Groq API) with prompt engineering and session memory; deployed as a **FastAPI** REST service.

Online Payment Fraud Detection System *(Final Year Project)* — 2025

- Built an end-to-end Machine Learning pipeline to identify fraudulent online transactions, including preprocessing, categorical encoding, and feature engineering.
- Conducted EDA to analyze fraud patterns, addressed class imbalance, and evaluated performance via confusion-matrix analysis of false positives/negatives.

Twitter Sentiment Analysis using BERT — 2025

- Fine-tuned a pre-trained BERT model for sentiment classification on social media text, applying NLP preprocessing and transformer-based modeling techniques.
- Evaluated model performance across multiple sentiment classes.

EDUCATION

BS Computer Science — November 2021 – July 2025
Women University Multan — CGPA: 3.62

CERTIFICATIONS & SEMINARS

- International Conference on Emerging Trends in Artificial Intelligence (2024)
- Tech Expo 2024 – Presented Final Year Project (Online Payment Fraud Detection)
